

week #2 update

you made it to week #2. lfg.

this is where your journey truly begins.

take a step back and look at all you've done in just one week.

what's your one-liner?

don't forget — your one-liner should be a short, catchy sentence that describes your project. it should be super easy to understand.

an ai-powered faculty advisor for university students

how you feelin on a scale from 1 - 10?

we just wanna know how you're feelin about your project + life in general :).

can you explain what your toy is? what did you create this week :)?

give us all the details. we wanna know all the highs and lows that got you to this point.

i created a barebones backend of the model using langchain, chroma db and my ollm of choice, i.e. llama 3-70b. i run my code off a python notebook at the moment and added some basic chat ui using gradio.

drop a picture / screenshot of a your toy.

we just wanna see the part you're most proud of!

delete

[optional] drop a link to a video demo of your toy. we'll include this on a page where we'll show everyone's toys.

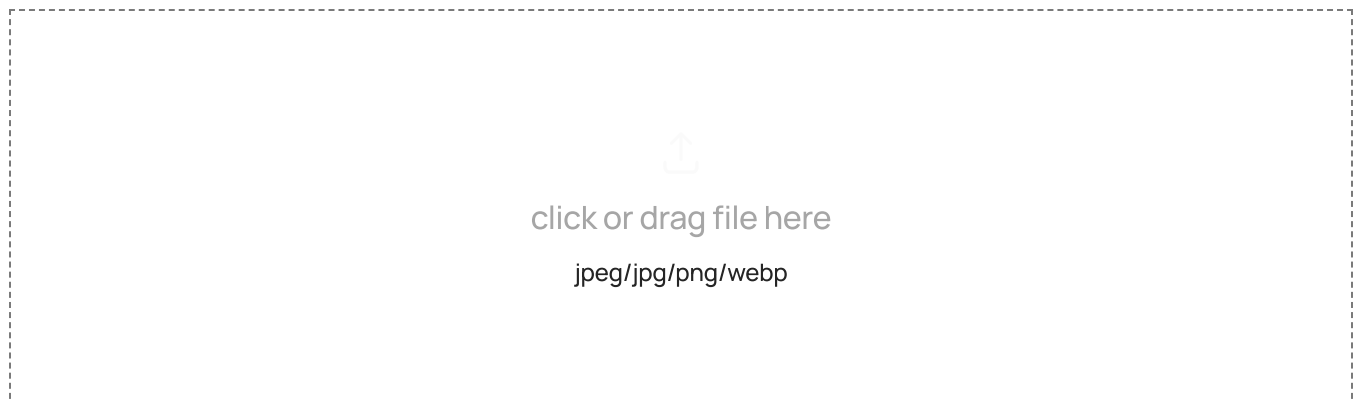

plz give a youtube link (unlisted is fine). no need to "present" your toy to us here or heavily edit this, we just wanna see it and get a sense of what you did this week! it can be scrappy.

<https://www.youtube.com/watch?v=znPayDyH3c>

show us some proof that you showed your toy to someone.

this can be a text screenshot where you sent the toy to a friend / colleague, a screenshot of a twitter, linkedin, tiktok, or insta reel / post where you presented the toy, whatever. we just need proof you showed to someone who's never seen the toy before.

cool. anything else interesting happen this week with you or your project you wanna mention?

any new life updates / project wins / cool learnings happen this week?

i ran into an issue with my vector db not retrieving relevant information to supplement the user query. this problem still remains at large but i'm considering alternatives/fixes.

[optional extra credit] starting with this update, we'll start keeping our eye out for people to give a \$5,000 grant to at the end of the season. if you're interested in this, go ahead and submit a reel / tweet / yt short / tiktok presenting your idea + showing us your toy from this week. we'll be watching these each week.

this doesn't need to be crazy fancy.

make sure you have this format:

1. introduce yourself
2. say your one liner for ur idea
3. show your idea/toy.
4. 30-40 second video or less.

<https://www.instagram.com/farza954>

p.s: if you make a video, tell josh about it! he's our film guy. we'll try to add you in a montage video.

[optional] if you have a link to your toy that's already live on the internet drop it below.

(ex. a link to ur app we can download, a link to ur ai app we can actually use, a spotify link to your song, etc) then drop it below.
